Expand your plant palette and become a plant expert!

Plant identification and knowledge is essential for both working and aspiring landscape and design professionals. Plants for the Landscape Specialization equips students with an extensive plant palette necessary to succeed in the landscape maintenance and design fields. The specialization gives students exposure to 400+ plants including their cultural requirements and landscape use.

Receive current working knowledge of industry standard plant material including unique cultivars and California native plants which are fundamental to a successful career in the landscape management, maintenance and design fields.

*Students can begin the program any quarter*
